iTRAIN LAUNCHES NEW WEB SITE AND REDEFINES ONLINE TRAINING

December 6, 1999 - AUSTIN, TEXAS - iTrain, Inc. (iTrain) is pleased to announce the launch of a new website for their innovative online training service: www.itraininc.com. The iTrain service delivers online training in a "Virtual Classroom": an online instruction technology that allows the student to interact real-time with the instructor from his or her own computer.

"One of the biggest problems businesses face is meeting their training needs," says Shannon Lear, President of iTrain, "Our service allows companies to have their employees stay on site and on the job, while still learning the skills necessary to make them more efficient and knowledgeable. Plus, this removes geographic restrictions to consistent training, everyone can learn at the same time, from anywhere in the country."

iTrain's web-based registration and training delivery can be sold as a packaged service to other companies interested in offering specific classes to a geographically diverse audience. This offers companies a tremendous advantage by utilizing the iTrain service to train employees without requiring additional investment in their own web infrastructure.

iTrain can meet all training needs through three new product offerings: **iClass, iHelp & iCorporate**.

iClass: Students can register for scheduled classes on standard or custom applications, all of which are delivered via the Internet in real-time. Class topics range from Microsoft Office applications to professional development for the workplace. Each class has a maximum time commitment of less than two hours, unlike traditional methods, which often require a series of daylong classes. Class size is limited to 10 students in application classes, however seminars with no interactivity can accommodate hundreds of attendees.

iHelp: Call, Connect & Communicate: Students receive customized individual training scheduled at their convenience, to focus on their specific needs. iTrain's experienced instructors provide one-on-one instruction on a wide variety of standard software applications.

iCorporate: Companies can add web-based instruction to their corporate training strategy. iTrain can convert any traditional training courses to online delivery, provide instructors, and deliver training to employees with no geographic boundaries! Companies can choose from a variety of training programs tailored to fit their needs.

About iTrain

iTrain, Inc., based in Austin, Texas, has redefined delivery of training via the Internet. Focused on eliminating the constraints of traditional training methods, iTrain has pioneered an online employee-training program that enables the customization and delivery of courses in a virtual classroom, overcoming the obstacles of time and geography. iTrain provides training on standard packaged applications and creates customized training courses for clients. These courses can be presented individually or to a geographically diverse audience. For pricing or more information, please visit the iTrain website at www.itraininc.com.
